## About the Incident

In late November 2021, hundreds of families, living on Joint Base Pearl Harbor-Hickam (JBPHH) and the Army's Aliamanu Military Reservation and Red Hill Housing, reported petroleum odors coming from residential tap water supplied by the U.S. Navy water system. Residents reported health issues arising from the contaminated drinking water.

Approximately 93,000 U.S. Navy water system users were impacted, many of whom relocated to temporary housing during the drinking water crisis.

The source of the petroleum was the nearby Red Hill Bulk Fuel Storage Facility, which contaminated the Red Hill Well, one of the Navy's sources for the Joint Base Pearl Harbor Hickam drinking water system.

EPA coordinated with the Navy, Army and the Hawai'i Department of Health (DOH) by forming an Interagency Drinking Water System Team (IDWST) to restore safe drinking water to the affected residents and workers. The team, which launched in December 2021, completed drinking water restoration in March 2022.

Over the next two years, the Navy is required to continue testing the affected drinking water area and continue work to cleanup the Red Hill drinking water well and impacted soil and groundwater.

## EPA's Work to Respond

EPA Deputy Administrator Janet McCabe visits the Joint Information Center at Joint Base Pearl Harbor-Hickam

- EPA was a core member of the Interagency Drinking Water System Team, which included representatives from the Navy, Army, Hawaii DOH, and EPA. The Interagency Drinking Water System Team transitioned out of the emergency response phase in March 2022.
- EPA deployed staff and contractors to O‘ahu and staff and managers regionally and nationally to provide technical support and expertise.

- EPA senior leadership coordinated daily with interagency partners over the course of the emergency.
- EPA continues to lend its technical expertise to help ensure that sampling efforts produce high-quality data and inform decisions protective of public health.

## **Safe Drinking Water Act Inspection Reports**

During the week of April 4th, 2022, the U.S. Environmental Protection Agency's (EPA) National Enforcement Investigations Center (NEIC) conducted public water system inspections at the U.S. Navy's Joint Base Pearl Harbor Hickam (JBPHH) and the U.S. Army's Aliamanu Military Reservation (AMR) to determine compliance with the requirements of the Safe Drinking Water Act (SDWA) and its implementing regulations.

EPA provided its inspection reports to the U.S. Navy and U.S. Army on May 27, 2022. The reports found that both the U.S. Navy and U.S. Army have failed to adequately operate and maintain their public water systems serving JBPHH and AMR. In response, the U.S. Navy and U.S. Army have taken steps to address EPA's concerns and have submitted documentation of their compliance activities, including photographic documentation and plans for implementation of structural controls to prevent animals from nesting inside the JBPHH's finished water storage tanks and to remove excessive vegetation from around the tanks. In addition, both the U.S. Navy and U.S. Army have submitted plans they will take to address EPA's findings.

Below are links to the SDWA inspection reports for both JBPHH and AMR public water systems. EPA has withheld release of some information in the JBPHH and AMR inspection reports, including two of the JBPHH report's appendices (Appendices E and F), that contain personally identifiable information and/or defense critical infrastructure security information.
